L21 ANSWER 1 OF 2 HCA COPYRIGHT 2005 ACS on STN

139:118790 Reversibly protected silanes for incorporation into curable coatings, silane preparation, and aqueous polymer composition.

Bowen, Daniel Edward, III; Castner, Eric Sean (The Goodyear Tire & Rubber Company, USA). PCT Int. Appl. WO 2003059918 A1 20030724, 236 pp. DESIGNATED STATES: W: AE, AG, AL, AM, AT, AU, AZ, BA, BB, BG, BR, BY, BZ, CA, CH, CN, CO, CR, CU, CZ, DE, DK, DM, DZ, EC, EE, ES, FI, GB, GD, GE, GH, GM, HR, HU, ID, IL, IN, IS, JP, KE, KG, KP, KR, KZ, LC, LK, LR, LS, LT, LU, LV, MA, MD, MG, MK, MN, MW, MX, MZ, NO, NZ, OM, PH, PL, PT, RO, RU, SD, SE, SG, SI, SK, SL, TJ, TM, TN, TR, TT, TZ, UA, UG, US, UZ, VN, YU, ZA, ZM, ZW; RW: AT, BE, BF, BJ, CF, CG, CH, CI, CM, CY, DE, DK, ES, FI, FR, GA, GB, GR, IE, IT, LU, MC, ML, MR, NE, NL, PT, SE, SN, TD, TG, TR. (English). CODEN: PIXXD2.

APPLICATION: WO 2002-US35357 20021104. PRIORITY: US 2002-PV346426 20020107.

AB Hydroxy-silane functional groups are reversibly protected by acid-cleavable protecting groups. The development of reversible protecting groups greatly enhances the current utility of silanes while introducing further novel applications. For instance, reversibly protected silanes are of particular value in applications where room temperature cure and/or adhesion is of value, such as coatings,

high resolution imaging, caulks, adhesives, sealants, gaskets, and silicones. Reversibly protected silanes can also be beneficially used in reticulating agents, sizing agents, tires, and release coatings. The reversibly protected silane can be incorporated into a coating resin by polymerizing a monomer containing the reversibly protected

silane into the resin or by post-addition into the coating formulation.

The reversibly protected silane remains protected under basic conditions, such as in a coating formulation that contains a volatile base, for instance NH₄OH. However, deprotection occurs under mildly acidic conditions. As a coating formulation containing a volatile base dries the volatile base evaps. and deprotection occurs, which allows for controlled room temperature crosslinking to occur

with hydroxy-functionalized polymers. A silyl-acetal compound consists of a silane having 3 or 4 acetal moieties, such as 3-methacryloxypropylsilane triacetal with tetrahydropyran-2-ol (monomer preparation given).

L21 ANSWER 2 OF 2 HCA COPYRIGHT 2005 ACS on STN

139:53801 Silyl-acetal compounds, polymers, their preparation and use.
Bowen, Daniel Edward; Castner, Eric Sean (USA). U.S. Pat. Appl.
Publ. US 2003114581 A1 20030619, 48 pp. (English). CODEN: USXXCO.
APPLICATION: US 2002-222739 20020816. PRIORITY: US 2001-PV312851
20010816; US 2001-PV326042 20010928.

AB Reversible protection of hydroxy-silane functional groups is achieved by acid cleavable protecting groups, e.g. a silane having 3 or 4 acetal moieties. The development of reversible protecting groups greatly enhances the current utility of silanes. For instance, reversibly protected silanes are of particular value in applications where room temperature cure and/or adhesion is of value, such as coatings, high resolution imaging, caulks, adhesives, sealants, gaskets, and silicones. Reversibly protected silanes can also be

beneficially used in reticulating agents, and in sizing agents, tires, and release coatings. The incorporation of reversibly protected silanes into coating resins is of particular value. The reversibly protected silane can be incorporated into the coating resin by polymerizing a monomer containing the reversibly protected silane into the resin or by post-addition into the coating formulation. The reversibly protected silane remains protected under basic conditions, such as in a coating formulation that contains a volatile base, for instance NH_4OH . Deprotection occurs under mildly acidic conditions. Thus, as a coating formulation containing a volatile base dries the volatile base evaps. and deprotection occurs. This allows for controlled room-temperature crosslinking to occur with hydroxy-functionalized polymers.
